Compliance with European Battery Directive **2006/66/EC amended by 2013/56/EU**

All batteries sold by Energizer and intended for sale in the EU market comply with Directive 2006/66/EC and amended by 2013/56/EU of the European Parliament and of the council regarding waste batteries and accumulators (The Battery Directive) and the transposed directive of the individual member states.

Because global marking regulations may differ, Energizer batteries not intended for the EU market may not meet the EU marking requirements. But, all Energizer batteries sold globally meet all the other requirements.

Original equipment manufacturer (OEM) batteries supplied by Energizer are compliant globally with the proper marking for the EU battery directive provided they are AAA (LR03) or larger. Batteries smaller than AAA (LR03) are too small and do not have enough surface area to print the appropriate markings. In these cases, the marking should appear in the instruction manual of the appliance.

The importer of record into an EU member state is required to register with the local collection and recycling organization (CRO) as a producer and pay a fee for every battery imported into the member state.

Please refer questions to your authorized Energizer dealer.
