

Frequently Asked Questions

Energizer Energi To Go™

1. How soon can I use my phone to make a call?

Performance is similar to your wall plug charger. That means on many phones, a call can be placed within 30 seconds of activating the *Energizer® Energi To Go™* Instant Cell Phone Charger on a cell phone with a completely discharged battery. Wireless phone models with robust multimedia applications may require more than a half a minute to activate.

2. What about PDAs/Blackberry's?

Again, performance is similar to your wall plug charger when the *Energizer® Energi To Go™* Instant Cell Phone Charger is used with *Energizer® e²® Lithium® AA* batteries. Some wireless phone models with robust multimedia applications may require more than a half a minute. Some Blackberry models could take up to 15 minutes before a call could be placed.

3. How long does it take to charge?

Works similar to wall plug adaptor (approximately 2 hours for charging).

4. How many hours of talk time can I get from a single charge?

As with all device applications, battery performance will be determined by usage and varies by phone. In general, 2 fresh *Energizer® e²® Lithium® AA* batteries can provide up to 3 to 9 hours of talk time or will completely charge a dead cell phone battery.

5. Can I use alkaline AA batteries to charge my cell phone?

Yes, but performance with *Energizer® e²® Lithium® AA* batteries is up to 3 times more effective than regular alkaline batteries.

6. How many charges can I get from a single set of batteries?

As with all device applications, battery performance will be determined by usage and varies by phone. A completely dead cell phone battery will, on average, completely charge with two fresh *Energizer® e²® Lithium® AA* batteries. A partially depleted cell phone battery can be topped off several times prior to depleting the *Energizer® e²® Lithium® AA* batteries.

7. How do I know when my cell phone is fully charged?

In general, the phone power indicator will behave similarly with *Energizer® Energi To Go™* Instant Cell Phone Charger as it does when plugged into a wall outlet.

8. Can I use different manufacturer connectors with the same charger?

Energizer has performed extensive testing on the connectors packed into *Energizer® Energi To Go™* Instant Cell Phone Charger to insure safety and performance. We can not guarantee the same level of quality in other manufacturers' connectors and therefore do not recommend using anything other than connectors sold with *Energizer® Energi To Go™* Instant Cell Phone Chargers.
