Step 1:
When batteries need to be replaced, use only Energizer Lithium CR2032 coin cells. Remove old CR2032 batteries.

Step 2:
Unscrew the retaining screw on the side of the top housing body (red).

Step 3:
Turn the top (red) in the direction of the arrow on the housing body to remove. Note: Due to weather-resistance protection of the product, the two housing body pieces fit together tightly.

Step 4:
Insert new batteries with the polarity in the direction as indicated on the top housing body.

Step 5:
Replace bottom (grey) housing body and turn in clockwise direction to tighten. Note: Make sure threads are properly aligned before securing in place.

Step 6:
Replace retaining screw. Note: An O-ring seal in the retaining screw needs to fit inside the opening to maintain water-resistance protection.
