Add that extra bit of safety and security to your home with the NLPLMF. When plugged in, you can set it in the “Off” position to charge the on-board NiMH battery. In the “Auto” mode, a photosensor switches the nightlight on and off automatically; and the light will remain on if the power goes out, helping you locate your light. When plugged in, the “On” position offers a brighter light. Away from the wall, the plug flips in and you have a portable flashlight.
